California Childcare Health Program

The mission of the California Childcare Health Program is to improve the quality of child care by initiating and strengthening linkages between the health, safety and child care communities and the families they serve.

 Portions of this curriculum were adapted from the training modules of the National Training Institute for Child Care Health Consultants, North Carolina Department of Maternal and Child Health, The University of North Carolina at Chapel Hill; 2004-2005.

Funded by First 5 California with additional support from the California Department of Education Child Development Division and Federal Maternal and Child Health Bureau.
LEARNING OBJECTIVES

To define school readiness.

To identify the links between health and school readiness.

To describe how quality of care in early care and education (ECE) programs improves children’s readiness for school.

To describe how Child Care Health Advocates (CCHAs) can play a role in the preparation of a child’s school readiness.

RATIONALE

At the national and statewide level, much attention has focused on when and how children become “ready” for school and how to adequately prepare schools for children starting kindergarten. Physical health plays an important role in school readiness because children who are not physically healthy may have a difficult time getting used to school due to frequent absences and distractions, such as pain associated with dental cavities. Basic health needs must be met before important learning can begin. ECE providers can help families get the health care their children need. In addition to physical health, social and emotional development is also an important part of school readiness (Thompson, 2002). Research in early childhood development clearly shows that intellectual, social-emotional and physical development are all related to each other (National Research Council, 2001). If ECE and health providers can identify children who have difficulties with physical or behavioral problems, children may get help to deal with these problems before they enter kindergarten. Understanding what school readiness is, and how ECE programs can help children become ready for school, is very important for CCHAs.
WHAT A CCHA NEEDS TO KNOW

School readiness involves “ready children, ready schools and ready communities.” Research shows that ECE programs can have a positive impact on children’s development. CCHAs can help children become ready for school and help ECE programs prepare children for school in the following ways:

• By providing health education and by helping families in securing health insurance and consistent health, dental and vision care for their children.

• By facilitating in-service programs so that schools learn to be ready to receive young children. CCHAs can teach primary school personnel about what children do in ECE programs and the skills they acquire in ECE programs.

• By making ECE providers and families aware of resources and services available in their counties to enhance school readiness.

Using the National School Readiness Indicators to measure school readiness assures that families, schools, communities and services are ready to help young children succeed. The First 5 School Readiness Initiative (SRI) provides funding opportunities to promote good physical, social and emotional development in children from birth to 5 years of age.

What Is School Readiness?

School readiness, in the broadest sense, involves children, families, early environments, schools and communities (National Association of School Boards of Education, 1991). Children are not naturally ready or not ready for school (Maxwell & Clifford, 2004). School readiness is more than being ready to learn new information. Readiness is based on all aspects of development, including social, emotional, physical and intellectual development. Young children develop in different ways at different rates. Some children may have strong language skills but weak social skills. Other children may be advanced socially but not verbally. Due to these normal differences in development, it is difficult to define readiness. Definitions of school readiness must be flexible and broadly defined to take into account these differences in development. The National Education Goals Panel (NEGP) (1997) identifies three parts to school readiness: readiness in the child, schools’ readiness for children, and supports and services from the family and community that contribute to children’s readiness.

School readiness is the preparedness of children to learn what schools expect or want them to learn (Edwards, 1999). The National Association for the Education of Young Children (NAEYC) (1995) describes three requirements for universal school readiness:

• Addressing the inequalities in early life experience so that all children have access to the opportunities that promote school success.

• Recognizing and supporting individual differences among children, including differences related to language and culture.

• Establishing reasonable and appropriate expectations of children’s capabilities when they first start school.

In a national study on the qualities that kindergarten teachers considered to be important for a child to be ready for school, teachers rated the following three qualities highest (National Center for Education Statistics, 1993):

• Is physically healthy, rested and well-nourished.

• Can communicate needs, wants and thoughts verbally in child’s primary language.

• Is enthusiastic and curious when approaching new activities.

Readiness of Children

The NEGP (1997) identified five areas of children’s development and learning that are important to school success:

• physical well-being and motor development (e.g., gross and fine motor skills)

• emotional and social development (ability to understand the emotions of others and to interpret and express one’s own feelings)

• language development (including listening and speaking skills, print awareness [the knowledge that printed words have meaning] and developing literacy)

• cognition and general knowledge (including knowledge about the properties of specific objects and knowledge gained from looking
Delays or challenges in any of these areas will affect the child’s ability to succeed in school. Children who are physically healthy and developmentally ready for kindergarten are more likely to have a successful overall school experience. Thus, ECE programs that provide health education and assist families in securing health insurance and consistent health, dental and vision care for their children can help children be ready for school. Efforts to improve school readiness, therefore, begin before children go to kindergarten. They begin with efforts to support families, educate parents, expand access to health care and raise the quality of ECE programs. Getting all children to start—and continue—school “ready to learn” is the shared responsibility of all adults and institutions in a community (NEGP, 1998).

**Readiness of Schools**

Many school readiness experts focus on what schools can do to meet the social and educational needs of young children (Stipek, 2002; Graue, 1993). Children’s readiness is a necessary part of defining school readiness, but it is not enough. The NEGP urged a close examination of “the readiness and capacity of the nation’s schools to receive young children” (Kagan, Moore & Bredekamp, 1995, p. 41). It is the school’s responsibility to educate all children who are old enough to legally attend school, regardless of the children’s skills (Maxwell & Clifford, 2004).

To aid this examination of schools, the NEGP proposed 10 characteristics of “ready schools”—schools that are ready to support the learning and development of young children. As stated in the Panel’s 1998 report, ready schools do the following:

- Smooth the transition between home and school. For example, they show sensitivity to cultural differences and have practices to reach out to parents and children as they make the transition to school.
- Try to have continuity between ECE programs and elementary schools.
- Help children learn and make sense of their complex and exciting world. For example, they use high-quality instruction, appropriate pacing and an understanding that learning occurs in the context of relationships.
- Are committed to the success of every child. Schools should be aware of the needs of individual children, including the effects of poverty and race. They should also try to meet special needs within the regular classroom.
- Are committed to the success of every teacher and every adult who interact with children during the school day. They help teachers develop their skills.
- Introduce or expand approaches that have been shown to raise achievement. For example, they provide appropriate interventions to children who are falling behind, encourage parent involvement and monitor different teaching approaches.
- Are learning organizations that change practices and programs if they do not benefit children.
• Serve children in communities. Children are more likely to successfully adjust to school when they have easy access to a range of services and supports in their community. Good health care and nutrition are especially important to children’s well-being and success in school.

• Take responsibility for results. Ready schools challenge every child and set high standards for all children.

• Have strong leadership. Ready schools have strong and committed leaders who have an agenda guided by a vision for education that is responsive to the needs of the children they serve.

Readiness of Communities

Communities need to support families with infants and toddlers, and help the families find the services they need. For example, families living at the poverty level should be encouraged to enroll their children in Early Head Start programs or participate in one of the 209 school readiness programs located throughout the state. Children growing up in families that cannot afford safe housing, good nutrition, health care or quality child care need to be supported by the community and offered services to meet the basic health needs of children. According to the National Association of State Boards of Education (1991), communities have a stake in the healthy development of young children and an obligation to support families. Research has shown that children with certain risk factors (such as living in a family that receives food stamps, living in a single parent home, having parents whose primary language is not English) enter school with fewer skills and are more likely to be in poorer health compared to children with no risk factors (Zill & West, 2001). Communities need to be able to address this concern and help children get the skills they need before they start kindergarten.

How to Measure School Readiness

To assess whether children, schools and communities are “ready,” there need to be ways to measure signs of readiness that can be tracked over time. The National School Readiness Indicators Initiative (2005) has put together a list of indicators (signs of readiness) from research carried out in 17 states, including California. These indicators can be measured and tracked to show progress and increased school readiness overall. Some of these indicators represent a risk for school failure and a need for services. For example, if low birth weight were a child indicator, states with a high percentage of children who were born with low birth weight would have a greater likelihood of these children having a difficult transition to kindergarten if no intervention took place. When states become aware of the risk factors in their population, services can be provided to improve these risks. Policymakers and community leaders can use the core set of indicators, as well as other indicators that develop from their own work, to measure progress toward improved outcomes for young children and families. Annual monitoring of key school readiness indicators can show whether changes are going in the right direction—and whether they are not. Measuring progress over time can lead to more informed decisions about programs, policies and investments (National School Readiness Indicators Initiative, 2005). See Table 1 for a list of the compiled indicators.

The First 5 California School Readiness Initiative (SRI)

In California, the First 5 SRI provides funding opportunities to promote good physical, social and emotional development in children from birth to 5 years of age. Using the NEGP definition of school readiness, the SRI works across systems to address all aspects of a child’s development. The purpose of the First 5 SRI is to improve the ability of families, schools and communities to prepare children to enter school ready to succeed. The SRI gives “incentive-matching funds” to First 5 County Commissions to fund local school readiness programs in communities that have schools in the lowest 30% of the Academic Performance Index (API). This means that every dollar that the state gives to the counties is matched by a dollar from the local County Commission and its partners. Like the state Healthy Start Initiative, the SRI collaborates to deliver services. School readiness programs must work with many community partners to coordinate supports and services for children ages birth to 5 and their families. Partners must include families, formal and informal ECE providers, district and school staff, and participants (including health services providers) in the “5

(From National School Readiness Indicators Initiative [2005]. Getting Ready: Executive Summary of the National School Readiness Indicators Initiative. A 17 State Partnership. Providence, RI: Rhode Island Kids Count.)
Essential and Coordinated Elements. There are 209 school readiness programs operating in the state, and they are located in every county. Contact the First 5 Commission in your county to learn more about SR programs in your area.

Essential and Coordinated Elements Required of Every School Readiness Program

Every school readiness program is required to include the following five elements in their services: early care and education; parenting and family support services; health and social services; schools’ readiness for children/school capacity; and program infrastructure, administration and evaluation.

Early care and education
This element includes ECE services; improved access to quality ECE through referrals, information and outreach to parents and providers; and improved implementation of effective practices through the training of ECE providers. Periodic school readiness assessments for children are part of this element.

Parenting and family support services
This element includes services to improve literacy and parenting skills, home visitation, employment development and family court services.

Health and social services
This element includes services such as health plan enrollment, and provision or referral to basic health care, including prenatal care, mental health counseling, services for children with disabilities and other special needs, nutrition, oral health, drug and alcohol counseling, child abuse prevention, and case management.

Schools’ readiness for children
This element includes the communication of kindergarten standards; schools’ outreach to parents; kindergarten transition programs; and cross-training, shared curriculum, and planning for ECE providers and early elementary teachers. The smooth provision of health, social services, after-school programs and other supports for children and families are also included. Periodic school readiness assessment for schools is part of this element.

Program infrastructure, administration and evaluation
This element includes participant/site/district/county coordination and staff training and development. Program evaluation aimed at continuously improving the program, being financially accountable and making decisions collaboratively (with families and community members) is also included (California Children & Families Commission, 2005).

The third element, health and social services, is the focus of the California Childcare Health Program’s (CCHP) training for CCHAs. ECE providers who participate in this training will be prepared to put this element into practice with confidence, increase their knowledge and contribute fully to the goal of school readiness.

What the Research Tells Us
It is known that children with behavior problems identified early in life, from birth to 5, are more likely to have difficulties with their performance in schools and their ability to adjust to structured school environments. Several research studies have followed children over time to show the impact ECE programs can have on later development. The results of these studies are briefly summarized in Table 2.

Link between Quality of Care in ECE Programs, Children’s Health and School Readiness
Children’s skills and development are strongly influenced by their families and their experiences in ECE programs (Maxwell & Clifford, 2004). ECE programs affect children’s development and learning. Research has shown that children who have attended high-quality ECE programs had better school readiness, better language comprehension and fewer behavior problems than children who did not attend high-quality ECE programs (National Institute of Child Health and Human Development [NICHD] Early Child Care Research Network, 2002; Peisner-Feinberg et al., 1999; Peisner-Feinberg et al., 2001). These differences were true for children from a wide range of family back-

</table>
| Compared to nonintervention children, vulnerable children (premature or abused) who attended center-based early childhood intervention programs showed the following:  
  - positive effects with fewer behavior problems in school (Egeland & Hiester)  
  - greater academic success at age 9 (Hollomon & Scott)  
  - fewer health conditions and positive social-emotional development at age 8 (McCormick, McCarton, Brooks-Gunn, Belt & Gross) | Egeland & Hiester (1995); Hollomon & Scott (1998); McCormick, McCarton, Brooks-Gunn, Belt & Gross (1998) |
| In a study of 4- to 8-year-old children, there was a strong relationship between physical health, mental health (e.g., behavior problems) and academic ability. Children who were healthy physically tended to succeed academically. | Essex, Boyce, Goldstein, Armstrong, Kraemer & Kupfer (2002)                                                                                                                                 |
| When children with special health care needs (e.g., low birth weight, disabilities and developmental delays) attend enriched intervention ECE programs, they perform better in school and have fewer special education needs and academic problems than similar nonintervention children. | Cohen (1995); Fowler & Cross (1986); Kochanek, Kabacoff & Lipsitt (1990); Saigal, Szatmari & Rosenbaum (1992) |
| Children with behavior problems identified in preschool had more aggression and acting out behaviors at age 9 than children with no behavior problems. | Campbell & Ewing (1990)                                                                                                                                 |
| Preschool-age children with mothers who have mental health problems (e.g., depression, intrusive interactions) were more likely than other children to have the following:  
  - a hard time socially with their peers (Gross, Conrad, Fogg, Willis & Garvey)  
  - lower academic achievement (McCormick et al.; Greenberg et al.)  
  - higher aggression (Egeland, Pianta & O’Brian) | Gross, Conrad, Fogg, Willis & Garvey (1995); McCormick et al. (1998); Greenberg et al. (1999); Egeland, Pianta & O’Brian (1993) |
| Children who have positive relationships with their peers and teachers in preschool have a more successful transition to kindergarten. | Ladd, Birch & Buhs (1999); Ladd, Buhs & Troop (2002)                                                                                                                                 |
| The quality of ECE or early intervention programs has been shown to affect the following:  
  - children’s social-emotional development and health during preschool (Alkon, Ragland, Tschann, Genevro, Kaiser & Boyce)  
  - academic success in third grade (Clarke-Stewart; Phillips & Scarr) | Alkon, Ragland, Tschann, Genevro, Kaiser & Boyce (1999); Clarke-Stewart (1993); Phillips & Scarr (1993) |
grounds, with even stronger effects for children at risk. Monitoring and improving the quality of care in ECE programs can have a positive impact on children’s school readiness. In addition, health policies in ECE programs that improve children’s health by preventing illness and injuries can also have a positive impact on children's readiness for school. Children who are healthy can more readily focus on learning. Children with significant problems with health or physical development may face special challenges in terms of their self-perception in adapting to the school setting and in terms of developing independence within the school setting (Halle, Zaff, Calkins & Margie, 2000). For a list of developmental screening tools that may be useful, see Table 2 in the Social and Emotional Development of Children module of this curriculum.

WHAT A CCHA NEEDS TO DO

Be Aware of Local School Readiness Programs

- All counties in California have a school readiness program. Find out what resources the school readiness programs offer and how to link ECE programs with these resources.
- County First 5-funded programs may support some programs or some parts of ECE programs; for example, some county First 5 programs cover the cost of professional development for ECE providers through the Comprehensive Approaches to Raising Educational Standards (CARES) program.

Provide Resources

- Provide resources for ECE staff and families on kindergarten choices in the community and on recommendations for how to pick the right kindergarten.
  - Arrange for a parent’s night about the transition to kindergarten by inviting some local kindergarten teachers to come and speak to parents.
  - Make sure there are books and pamphlets available for both parents and children about the transition to kindergarten and information about how to enroll children in kindergarten.

Train ECE Staff

- Share information on your counties’ school readiness program with ECE staff.
- Educate ECE staff about the definition of school readiness, how to help children and families be ready for kindergarten and what to do to prepare for the transition to kindergarten.

Link with Public Elementary Schools in the Area

- Encourage ECE providers to communicate directly with local elementary schools to find out what the requirements are for starting kindergarten.
- Identify registration dates for kindergarten and what forms parents need to complete to register.
- Arrange a field trip to visit a kindergarten class to help children prepare for the transition from preschool to kindergarten.
- Arrange for ECE providers to visit kindergarten classrooms and for kindergarten teachers to visit ECE programs to help build partnerships between ECE and kindergarten programs.
  - By visiting the classrooms, the ECE providers can observe what is expected of kindergarten students and the kindergarten teacher can see what the children experience before starting kindergarten.

Encourage School Readiness

- Encourage schools to be ready for children and for children to be ready for school at the local, state and national level.
- Attend conferences, read current research and be aware of changes in trends in the school readiness field.
- Ensure that school readiness efforts benefit young children.
- Provide in-service education workshops for school staff to learn more about ECE programs: what the programs provide, developmental stages for young children and readiness skills identified in ECE programs.
Use Best Practices

CCHAs can use the guidelines presented in Table 3 to provide comprehensive services and assistance to ECE programs, school readiness programs, children, families and community partners. Table 3 was developed from a recent literature review of school readiness programs in the United States (not including California), *Health and School Readiness: A Literature Review of Selected Programs, Components, and Findings in the U.S.* (Emel & Alkon, 2006). This table summarizes best practices for school readiness programs. While these findings address components of the programs themselves, they also provide important guidelines for CCHA practices as well.

| **Access to Health Insurance**             | Assisting families to obtain health insurance for children by merging applications or having health insurance information readily available at community centers and sites utilized by families | Minimal assistance with accessing health insurance; no hands-on approach                    |
| **Access to Available Services**           | Outreach to families to assist with access to available services such as WIC, Food Stamps, Medicaid/ MediCal, early care and education programs | Assuming families know what services are available to them and how to access the services |
| **Health Screenings**                      | Providing health screenings, assessments, and referrals for medical, vision, oral health, mental health, and social/emotional development | No health screening, assessments, or referrals                                            |
| **Mental Health**                          | Use of mental health consultants to assist with screening for and access to mental health care | Trying to provide mental health screenings without professional consultation               |
| **Immunizations**                          | Send parents letters prompting them to have their child vaccinated on time              | Giving parents an immunization schedule without accompanying prompts.                    |
| **Nutrition**                              | Provide nutrition education to parents and link to WIC and food stamp programs.         | No health education for parents; difficulty accessing needed services.                    |
| **Lead Poisoning**                         | Provide education to parents regarding lead poisoning and effective home maintenance practices to reduce lead exposure. | Assuming there is no problem with lead poisoning anymore; assuming parents know what to do regarding possible presence of lead. |
| **Oral Health**                            | • Include oral screening in other health screenings.  
                                    | • Utilize points of entry into WIC, child care, home visits, and during immunizations to make referrals for oral health care and provide parent education.  
                                    | • Provide transportation to dental services.  
                                    | • Provide dental services directly. | • Neglecting to include oral health in screenings; making referrals difficult to obtain.  
                                    | • Assuming that families will use public transportation to get to dental services |
# ACTIVITY

Using the grid below, break up into groups and discuss your activities for supporting school readiness.

## Linking Health and Social Services with ECE Programs: How Involved Are You?

The Healthline team of specialists consults on issues such as infectious disease, health promotion, behavioral health, serving children with disabilities and special needs, nutrition, infant-toddler development, car seat safety, lead poisoning prevention and more.  
The Child Care Health Linkages Project, funded by the First 5 California, created child care health consultation programs in 20 counties, staffed by trained Child Care Health Consultants (CCHCs) and CCHAs.  
The *Child Care Health Connections* newsletter, a bimonthly publication disseminated statewide, provides current and emerging health and safety information for the ECE community. Articles are designed to be copied by programs and broadly distributed to direct service providers and parents. Other publications include *Health and Safety Notes* and *Fact Sheets for Families*, available in both English and Spanish. |
<p>| <strong>California Child Care Resource and Referral Network</strong>&lt;br&gt;111 New Montgomery Street, 7th Floor&lt;br&gt;San Francisco, CA 94105&lt;br&gt;Trustline (800) 822-8490&lt;br&gt;www.rrnetwork.org/rnet/index.htm | This private nonprofit organization is a network of all county R &amp; R services. California’s R &amp; R services have evolved from a grassroots effort helping parents find child care to a well-developed system that supports parents, providers and local communities in finding, planning for, and providing affordable, quality child care. |</p>
