

A Safe Infant Sleeping Environment

Reducing the Risk of SIDS and Other Sleep-Related Infant Deaths

The following steps, recommended by the American Academy of Pediatrics, will help keep your baby safe when sleeping.

- Always put your baby to sleep on **back** until 1 year of age.
- Place your baby on a firm, flat mattress, with a fitted crib sheet, in a crib that meets the Consumer Product Safety Commission safety standards.
- Keep the crib free from toys, mobiles, stuffed animals, pillows, crib bumpers, blankets, positioning devices and extra bedding.
- Breastfeeding is recommended.
- The safest place for your baby to sleep at night is in a crib in the room where you sleep, but not in your bed, for at least the first six months.
- Keep the bedroom well ventilated, at a temperature that is comfortable for a lightly clothed adult.
- Don't put your baby to sleep on an adult bed, sofa/ couch, armchair, cushion, pillow, or in a car seat, stroller, swing, or bouncy chair.
- Check your baby periodically while asleep.
- **Remove** bibs, clothes with hoods or ties, and hats.
- Weighted clothing or other weighted objects are not safe and are not recommended.
- You may offer a pacifier, once breastfeeding is established. The pacifier should not be attached to the baby's clothing by a string or ribbon.
- Keep your baby's space smoke- and vape-free.

- Make supervised tummy time part of your baby's daily activity when awake.
- Make sure everyone who takes care of your baby follows safe sleep practices.
